SUMMARY

Android Developer with 1.8+ years of experience building scalable, production-grade mobile applications in Kotlin and Jetpack Compose, specializing in video streaming, real-time systems, location-based features, and ANR/crash reduction.

SKILLS

Languages: Kotlin, Java, Python

Android: Jetpack Compose, Android SDK, ExoPlayer, MVVM, Coroutines, Flow/StateFlow/SharedFlow, Repository Pattern, Room

Location & Maps: FusedLocationProvider, OpenStreetMap (osmdroid), Foreground Services

Backend & Cloud: Firebase, AWS S3, Spring Boot

Networking: OkHttp, Retrofit

Tools & Practices: Git, CI/CD, SonarLint, Production Debugging (ANR/Crash Analysis)

Languages Spoken: English, Hindi, Telugu

EXPERIENCE

Android Developer — Mobicule Technologies, Pune, Maharashtra Jan 2025 – Present

- Built a full in-house video workflow (upload, streaming, playback) using ExoPlayer, replacing third-party YouTube integration and eliminating 100% of that external dependency, improving stability and performance.
- Developed a GPS-based field visit tracking module using Kotlin and MVVM that captures and visualizes travel routes to verify distance for reimbursement calculations, using background location tracking and polyline-based route rendering.
- Engineered a secure face-authentication module for a check-in system using biometric matching, eliminating user impersonation risk.
- Led R&D on AWS S3 integration to design a direct-upload module enabling scalable video streaming via secure, time-limited URLs.
- Root-caused and resolved camera-related production ANRs, reducing the ANR rate from 0.45% to 0.37% (~18% reduction) and eliminating recurring occurrences; assisted in diagnosing Window-related crashes using production debugging tools (ANR traces, crash reporting dashboards).
- Collaborated with multiple teams to support the transition from Razorpay to Cashfree, coordinating requirements across teams.

PROJECTS

Running Tracker (Kotlin, Jetpack Compose, Room, OpenStreetMap)

- Built an offline-first running tracker using Kotlin, Jetpack Compose, MVVM, Room, and OpenStreetMap (osmdroid), enabling users to track live GPS routes, distance, duration, pace, and run history without relying on paid map APIs.
- Implemented real-time location tracking with a Foreground Service, integrating FusedLocationProvider, runtime location permissions, persistent notifications, and lifecycle-safe location collection to maintain tracking while the app is in the background.
- Designed a dedicated RunningTrackerEngine to process GPS data using accuracy filtering and a 3-meter movement threshold, calculate distance and pace, and manage run states (start, pause, resume, stop) while preventing distance/time corruption during pauses.
- Implemented offline run persistence with Room, storing run metadata and individual GPS coordinates, supporting completed-run history and detailed route visualization with reusable repository/ViewModel/StateFlow architecture.

Smart Download Manager (Kotlin, MVVM, Coroutines, Flow, OkHttp)

- Built an Android download manager with real-time progress, speed tracking, and ETA calculation using Coroutines, Flow, StateFlow, and SharedFlow for reactive, responsive UI updates.
- Designed a production-style architecture with repository pattern and reactive state management, supporting pause/resume, download history, notifications, and concurrent downloads.

My Bucket (Kotlin, Jetpack Compose, Room, MVVM, Repository Pattern)

- Designed and developed an offline-first Android work-tracking application enabling end-to-end tracking of responsibilities across Development, SIT, UAT, Production, and Post-Production stages.
- Engineered a lifecycle-based tracking system capturing stage transitions, time spent, SIT issues, ownership, and outcomes, providing personal productivity insights and a historical view of completed work for performance analysis and career growth.

LEADERSHIP & ACHIEVEMENTS

- Led a freelance project as team lead over 3 developers, delivering a custom app solution on time and within scope.
- Received the Trendsetter Award for pioneering Python adoption at the company, introducing it to build a secure face-authentication solution outside the team's traditional tech stack.

EDUCATION

M.Sc. Computer Science — Modern College, Shivajinagar, Pune 2025

B.Sc. Computer Science — New Arts Commerce Science College, Ahmednagar, Maharashtra 2023
